CLAIM AMENDMENTS:

1. (Canceled) Please cancel Claim 1 without prejudice.
2. (Canceled) Please cancel Claim 2 without prejudice.
3. (Canceled) Please cancel Claim 3 without prejudice.
4. (Canceled) Please cancel Claim 4 without prejudice.
5. (Canceled) Please cancel Claim 5 without prejudice.
6. (Currently amended) ~~The method of claim 1, wherein the using the user-specific context information further comprises:~~  
A method comprising:  
receiving digitized voice data from a user;  
processing the voice data to determine one or more phrases recognized as the digitized  
voice data provided by the user based on a currently active recognition grammar;  
when more than one phrase is recognized as the digitized voice data provided by the user  
as a result of voice-recognition uncertainty, using user-specific context  
information to choose a recognized phrase from the one or more phrases  
recognized as the digitized voice data;  
selecting elements of uncertainty within the one or more recognized phrases;  
selecting the user-specific context information from a database based on the elements of  
uncertainty;  
eliminating phrases within the one or more recognized phrases based on the user-specific  
context information regarding the elements of uncertainty; and  
selecting a final phrase as the recognized phrase once all other phrases within the one or  
more recognized phrases are eliminated.

PATENT

7. (Original) The method of claim 6, further comprising:  
storing user context information contained in the database including e-mail information,  
voice mail information, calendar information and location information.
8. (Currently canceled) Please cancel Claim 8 without prejudice.
9. (Currently amended) The method of claim 68, wherein the using the user-specific  
context information further comprises:  
processing the voice data using an N-best speech recognition engine;  
receiving the list of one or more phrases as N-phrases recognized as the voice data  
provided by the user including a confidence value associated with each of the N-phrases  
selecting a phrase from the one or more recognized phrases having a lowest confidence  
value;  
selecting elements of uncertainty between the phrase and the one or more recognized  
phrases;  
selecting the user-specific context information from a database based on the elements of  
uncertainty;  
eliminating the phrase when the user-specific context information regarding the elements  
of uncertainty validates the lowest confidence value of the phrase; and  
repeating the selecting, selecting, selecting and eliminating steps until a final phrase is  
determined as the recognized phrase.
10. (Canceled) Please cancel Claim 10 without prejudice.
11. (Canceled) Please cancel Claim 11 without prejudice.
12. (Canceled) Please cancel Claim 12 without prejudice.
13. (Canceled) Please cancel Claim 13 without prejudice.

PATENT

14. (Canceled) Please cancel Claim 14 without prejudice.

15. (Currently amended) ~~The computer readable storage medium of claim 10;~~  
~~wherein the instruction for using the user-specific context information further comprises:~~  
A computer readable storage medium including program instruction that directs a  
computer to function in a specified manner when executed by a processor, the program  
instructions comprising:  
receiving digitized voice data from a user;  
processing the voice data to determine one or more phrases recognized as the digitized  
voice data provided by the user based on a currently active recognition grammar;  
when more than one phrase is recognized as the digitized voice data provided by the user  
as a result of voice recognition uncertainty, using user-specific context  
information to choose a recognized phrase from the one or more phrases  
recognized as the digitized voice data;  
selecting elements of uncertainty within the one or more recognized phrases;  
selecting the user-specific context information from a database based on the elements of  
uncertainty;  
eliminating phrases within the one or more recognized phrases based on the user-specific  
context information regarding the elements of uncertainty; and  
selecting a final phrase as the recognized phrase once all other phrases within the one or  
more recognized phrases are eliminated.

16. (Original) The computer readable storage medium of claim 15, further comprising an instruction for:  
storing user context information contained in the database including e-mail information, voice mail information, calendar information and location information.

17. (Canceled) Please cancel Claim 17 without prejudice.

18. (Currently amended) The computer readable storage medium of claim ~~15~~<sup>17</sup>, wherein the instruction for using the user-specific context information further comprises:

22. (Canceled) Please cancel Claim 22 without prejudice.
23. (Canceled) Please cancel Claim 23 without prejudice.
24. (Canceled) Please cancel Claim 24 without prejudice.
25. (Canceled) Please cancel Claim 25 without prejudice.
26. (Currently amended) ~~The system of claim 25, wherein the user context natural language processor~~

42390P9238

PATENT

A voice recognition system comprising:

a voice recognition engine processes the voice data to determine one or more phrases recognized as the digitized voice data provided by the user based on a currently active recognition grammar;

a database containing user context information;

a user context natural language processor having a capability to select user-specific context information from a PIM database and use the user-specific context information to choose a recognized phrase from the one or more phrases recognized as the voice data when the voice recognition engine recognizes more than one phrase as the voice data provided by the user, the user context natural language processor further capable of selecting a phrase within the one or more recognized phrases having a lowest confidence value, selecting conflicting elements between the phrase and the one or more recognized phrases, selecting the user context information regarding the user from a database based on the conflicting elements, eliminating the phrase when the user context information regarding the conflict elements validates the lowest confidence value of the phrase; and repeating the select, select and eliminate operations until a final phrase is determined as the recognized phrase; and

an N-best speech recognition engine and generates N-phrases recognized as the voice data including a confidence value associated with each of the N-phrases as the list of one or more phrases recognized as the voice data provided by the user.
